DELAWARE'S FARM INCOME

Crop and Livestock Production

Acreage of Crops
Livestock Numbers

Compiled from U.S.D.A. Releases

Raymond C. Smith

The Delaware agricultural statistics on the following pages are taken from publications of the United States Department of Agriculture. (The Maryland-Delaware Crop Reporting Service supplied much of the original data.) These data have been assembled and reproduced in this form to be supplied to individuals, firms, and agencies interested in the State's agriculture.

Cash Receipts

Cash receipts from farm marketings were up in 1981 as compared to 1980. Receipts amounted to $392.5 million, 15.8 percent above 1980. Receipts from crops increased by 19.2 percent, while livestock receipts increased by 14.4 percent.

Among the crops, soybeans and corn accounted for the largest absolute increases in income, while broilers accounted for most of the increase in income from livestock, Table 1.

Gross and Net Income Per Farm

Gross income per farm increased 15.8 percent to reach an all time high of $119,252. Production expenses per farm increased by 10.8 percent. Net income per farm before inventory adjustment averaged $22,162. Net income after inventory adjustment averaged $23,867, an increase of 67.1 percent as compared to 1980. Table 2.

Gross Farm Income, Production Expenses and Net Farm Income

Gross farm income reached an all time high of $417.4 million. This was accompanied by an all time high of $339.8 million in production expenses. The largest single production expense was feed. Expenses for livestock, depreciation, and repairs and operation of capital items were each above $30 million.

Net farm income after inventory adjustment totaled $83.5 million in 1981, as compared to $50.0 million in 1980.

Grain Production

Delaware farmers harvested 18.6 million bushels of corn in 1982, which was 20.7 percent more than the 1981 production. Average corn yield in 1982 was 102 bushels per acre, as compared to 85 bushels per acre in 1981. Because of lower yields, soybean production was lower in 1982 as compared to 1981. Wheat production was up in 1982 because of an increase in both acreage and yield.

Footnotes for Tables 3-6

1/ Figures for 1981 are preliminary; figures for 1980 are revised.

2/ Based on statistics received from the Maryland-Delaware Crop Reporting Service, College Park, Maryland.

3/ Cash farm income data are not available by counties. The county data were obtained by breaking down the State cash farm income of each commodity by counties according to the division indicated in the 1978 Census of Agriculture.

4/ Sweet potatoes, broccoli, bussels sprouts, cabbage, carrots, cauliflower, green peppers, spinach, and miscellaneous vegetables.

5/ Strawberries and miscellaneous fruits and nuts.

6/ Lespedeza seed, red clover seed, other seeds and other field crops.
